Cleanse Your Liver & Feel Your Power!

Your Liver: Why It's So Important

Your liver is keeping you alive every second of every day. In fact, it does more jobs for you than any other organ in your body. Medical science is still discovering the many functions it does for you, and in my opinion, they will never know everything.

What we do know is that it creates glucose, the body's only chemical that gives us pure ENERGY to do the things we want to do in life. That alone is a great reason to keep your liver clean and healthy.

But more than that, it also creates digestive fluids needed to digest foods, along with enzymes that neutralize toxic poisons in your blood. It also creates hormones, breaks down fats, kills bacteria and viruses, synthesizes protein and stores everything from immune cells to iron to Vitamins A, B-12, D, E, K and on and on and on...

MORE ENERGY

It's your liver's job to convert carbohydrates you eat into glucose. Glucose is the primary ENERGY source of the human body. Your liver makes glucose and then stores it for you as a reserve energy supply. When you need energy anytime, 24/7, your liver releases this stored glucose, and WOW, you get an energy blast second to none, better than coffee! Keeping your liver healthy and clean simply helps you have all the energy you need, whenever you need it.

PROTECTS YOU

Modern living in most of the civilized world is a toxic, poisonous and actually lethal experience. What is in your food, water and air is trying to create disease and kill you every second of every

day. Thank God for your liver, because it's saving your life, every day.

Your liver is the ultimate detoxification organ in your body. Unfortunately, in our modern world, most of the food you consume is dusted with, grown with, dipped in, sprayed, mixed, colored, flavored and preserved with thousands of different toxic chemicals, and then packaged in toxic containers. It's the same with the water you drink and the air you breathe.

Everything you eat and drink is digested and then travels through your liver FIRST, before entering your bloodstream to feed every cell in your body.

Think about it, my friends, considering that there are about 100,000 new chemicals floating around in our environment, and our bodies, a little flushing, cleaning and protecting of your liver once a year doesn't seem so extreme, does it? The bottom line, keeping your liver healthy... keeps you healthy.

PREVENTS DISEASE

Your liver removes all of this harmful material from your blood that, if left behind, will cause heart attacks, strokes, circulatory disease, cancer, neurological diseases and a hundred other diseases. This is why many doctors will often say that, when you have almost any disease, your liver was sick long before your disease developed.

SO CLEAN IT

The bottom line is that there is no escape from the toxic, environmental overload on your liver. If you live anywhere on this planet (and especially in America), your liver is likely overworked and congested with the toxic waste it has been constantly trying to keep out of your body and bloodstream.

Liver flushing and cleansing causes the liver to empty its toxic contents, so it can start fresh, work more efficiently, to give you many more years of trouble-free service.

Dr. Schulte

How Your Liver **WORKS**

Although your medical doctor would like you to believe that they have figured your liver out and got it all down, the reality is that your liver is the most metabolically complex organ in the entire human body, more than even your brain.

Modern medicine is still discovering all of the things the liver does to keep you alive every second of every day. The tasks are up to 260 unique functions...and counting.

Bottom line, your liver has numerous different microscopic functional units and is as complex and infinite as outer space!

One of the main reasons I know God was a Natural Healer (and NOT a medical doctor) is the liver itself. It is so incredibly complex that it's best to just leave it alone and create a healing lifestyle for it, and DON'T TOUCH IT, HANDS OFF.

Now, let me try to boil it down and make understanding the functions of the liver as simple as possible...

FIRST LINE OF DEFENSE

First, your entire blood supply passes through your liver, especially the blood from your digestive organs, which contains nutrition and end-products of digestion. This happens BEFORE this blood enters your general circulation to the rest of your body.

To simplify it further, your liver is the DEFENSIVE BARRIER between the things you take into your

body and the blood that feeds that body, which is why it is often called "your first line of defense".

ENERGY & NUTRITION

Your liver is your life force, the source for your ENERGY. Your liver synthesizes the sugar glucose from carbohydrates or starches that you eat. Glucose is the most important carbohydrate in your body's metabolism. It could just be called PURE ENERGY, because it is used by your brain and every other cell of the body for just that: ENERGY.

If you're feeling low energy, fatigued and sluggish, no matter how much sleep you're getting or how well you're eating...it's time to do a liver cleanse.

DETOXIFICATION

Your liver is the blood detoxification organ in your body. The liver detoxifies, neutralizes, renders harmless and eliminates all of the harmful toxic poisons, chemicals and substances you may ingest, and keeps them out of your bloodstream.

It produces many different enzymes that actually convert toxic poisons into harmless chemicals and then they are eliminated in the bile that your liver excretes.

The main idea in Natural Healing (as opposed to conventional medicine) is to prevent disease and protect your body, before it gets sick. And your liver (more than any other organ in your body) prevents you from getting sick!

Even conventional doctors will tell you that long before most diseases surface, often the liver was overloaded, weak and unable to perform its job. That's why it is so important to cleanse your liver on a regular basis. It literally helps EVERY system of your body to work better, and stay healthier.

Your Liver Neutralizes And Flushes Out...

Liver Cleansing: Why Everyone Needs It

Given our modern world, this means your liver has the single most stressful job in your body... by a long shot. In fact, if you were asked to choose between being an air-traffic controller at Los Angeles Airport, or doing the job of a liver for one day, you'd be smart to take the air-traffic controller job.

As you saw on the previous pages, your liver is responsible for over 260 unique functions within your body, and all of them are designed to keep your body running clean and efficient. Bottom line, your liver is keeping you alive every second of every day, and it NEVER gets a break.

This is because the liver is involved, one way or another, in nearly every bodily process, with its focus on the crucial job of DETOXYFING the body at every step. This need for your body to detoxify is more important than ever before, because we live in a more toxic environment than ever before in history.

First, our modern American diet, rich in animal flesh, fried foods, refined oils, and chemical additives, will weaken and overload your liver.

Add in alcohol, tobacco, and environmental pollution, and the liver is starting to get severely overworked.

Now, add the stress of modern life, along with all of the environmental toxins we are absorbing every second, from

the air we breathe, to the clothes we wear, the furniture we sit on, the rooms we spend time in...and WOW, toxins are EVERYWHERE!

Is it really any surprise our livers are so overwhelmed, and possibly even sick?

Despite the stacked odds against a healthy liver, the amazing reality is that optimum liver function can be restored, and even a damaged liver is able to regenerate, much like skin heals and regrows after its been cut.

The bad news is that an overloaded liver can be hurt, sick and damaged for a very LONG TIME before its energy reserves are pushed so hard that disease and deterioration are even detected.

This is why Dr. Schulze says:

“Disease doesn’t just happen overnight. Heart disease, cancer—nearly ALL disease—develops months, even years after your liver failed to keep your body and blood clean.”

— Dr. Schulze

"If you are a human being who eats, drinks and breathes, and if you live anywhere on this planet, your liver has been attacked, damaged and maybe is even sick. Get **Un-Clogged.**

Your Liver Is Vital.

Heart attacks and strokes are the #1 cause of death in America. They are caused by cholesterol build-up blocking either the coronary artery (to your heart) or the cerebral artery (to your brain).

One of your liver's main jobs is to filter and balance the amount of fat and cholesterol in your blood. But, once the liver becomes overloaded and overworked by too much

cholesterol and environmental toxins in the body, it can't do its job efficiently, and your risk of blockage, heart attacks, stroke, and death skyrockets.

Beyond the obvious seasonal Liver Detox to flush and cleanse the liver regularly, it is important to protect your heart and brain, and lower your risk naturally, especially if you are over 40.

The Cause Of **99% OF ALL HEART ATTACKS** and the majority of strokes and other circulatory diseases.

Everyone needs to protect his or her heart, brain, blood vessels, arteries, veins and capillaries... EVERYONE. Stopping the number of deaths from heart disease is one of Dr. Schulze's biggest priorities. He has said, "Imagine a ticking time bomb underneath your car, but instead of diffusing it, you wash your car and maybe give it a tune-up. All these things make your car look and run better, but the next day, the bomb still goes off. I can help you diffuse the possible ticking time bomb with my Heart Formula."

VITAMIN-C: Synthetic vs. Natural!

If your Vitamin-C says ascorbic acid on it, then it is a combination of:

- SUGAR
- NAIL POLISH REMOVER
- PLASTIC
- BLEACH

SYNTHETIC VITAMIN-C IS DEAD

SYNTHETIC Vitamin-C, or Ascorbic acid, is not found in nature, and it is not a food. It is a synthetic chemical. It can only be made in a laboratory, from sugar that has been mutated with extremely harsh and powerful toxic chemicals. It is NOT alive. It is DEAD.

Outrageously, almost every single popular Vitamin-C supplement on the market today is made using chemically-synthesized Ascorbic acid. WHY? Well, for one reason (and one reason only), it is from China and extremely CHEAP—it only costs a thousandth-of-a-cent per ounce!

NATURAL Vitamin-C Complex, occurs naturally, in nature, in fruits, vegetables and herbs. It is a unique complex of a wide variety of nutrients, that's why it is called Vitamin-C COMPLEX. It is much more than just one single chemical like ascorbic acid. It is Vitamin-C, hesperidin, rutin, plus numerous bioflavonoids.

LOWER INCIDENCE OF CANCER

There are over 5,000 natural Vitamin-C Complexes and flavones found in food, which are extremely important to health. In just one study of 475,000 people in ten European countries it was found that people whose diets are rich in flavones had a much lower incidence of cancer.

THE POWER OF VITAMIN-C COMPLEX

All of the Vitamin-C Complex nutrients are recognized, assimilated and utilized by your body. They are super-foods, powerfully nutritious stimulating, building and repairing foods for your body.

Remember, vitamins are much more than just a single chemical; they are a live, organic complex of nutrients, enzymes, co-enzymes, antioxidants, trace minerals, biochemically alive and active.

Synthetic

Almost all well-known research about the amazing healing and health benefits of Vitamin-C was **NOT done on Ascorbic acid**, but done using foods rich in Vitamin-C. Don't be misled!
